

Post-incident review PIR-2025-008

Order Management: delayed processing

Contoso Platform Engineering. Fictional sample data.

Summary

On 26 June 2025, Order Management experienced delayed processing in staging (AU East) for about 110 minutes. Staff in the contact centre noticed the console was slow and told the service owner. Investigation found that an upstream identity provider returned intermittent timeouts.

Impact

Users of Order Management saw delayed processing for about 110 minutes. The service owner, Commerce Platform, led the response.

Timeline

- 09:03 First signal received.
- 09:34 Incident declared and on-call team engaged.
- 09:55 Likely cause identified.
- 10:10 Mitigation applied.
- 10:54 Service confirmed healthy and incident closed.

What happened

Investigation found that an upstream identity provider returned intermittent timeouts.

All traffic depended on one component with no standby.

It took time to work out which team owned the affected component.

What went well

Responders communicated clearly in the incident channel and the status page was updated within fifteen minutes of the incident being declared.

Actions

- Load test the service at twice the expected peak before the next campaign.
- Assign a named owner for the component in the service catalogue.
- Move certificate renewal into the automated rotation pipeline.
