

Post-incident review PIR-2026-006

Identity Platform: delayed processing

Contoso Platform Engineering. Fictional sample data.

Summary

On 10 May 2026, Identity Platform experienced delayed processing in staging (Southeast Asia) for about 75 minutes. The error-rate alert paged the on-call engineer. Investigation found that a gateway routing rule was updated to send traffic to a new backend pool that had not been warmed up.

Impact

Users of Identity Platform saw delayed processing for about 75 minutes. The service owner, Identity and Access, led the response.

Timeline

- 09:03 First signal received.
- 09:22 Incident declared and on-call team engaged.
- 09:45 Likely cause identified.
- 10:23 Mitigation applied.
- 10:48 Service confirmed healthy and incident closed.

What happened

Investigation found that a gateway routing rule was updated to send traffic to a new backend pool that had not been warmed up.

It took time to work out which team owned the affected component.

What went well

Responders communicated clearly in the incident channel and the status page was updated within fifteen minutes of the incident being declared.

Actions

- Assign a named owner for the component in the service catalogue.
- Load test the service at twice the expected peak before the next campaign.
- Write and rehearse a runbook for this failure mode.
