

# Post-incident review PIR-2026-047

## Mobile Backend: degraded latency

*Contoso Platform Engineering. Fictional sample data.*

### **Summary**

On 10 June 2026, Mobile Backend experienced degraded latency in production (AU Southeast) for about 25 minutes. A developer in another team noticed their integration tests failing against the service. Investigation found that the managed message broker in the region had a partial outage.

### **Impact**

Users of Mobile Backend saw degraded latency for about 25 minutes. The service owner, Mobile Engineering, led the response.

### **Timeline**

- 09:17 First signal received.
- 09:36 Incident declared and on-call team engaged.
- 09:44 Likely cause identified.
- 10:17 Mitigation applied.
- 10:36 Service confirmed healthy and incident closed.

### **What happened**

Investigation found that the managed message broker in the region had a partial outage.

All traffic depended on one component with no standby.

### **What went well**

Responders communicated clearly in the incident channel and the status page was updated within fifteen minutes of the incident being declared.

### **Actions**

- Add a circuit breaker and timeout on the upstream call.
- Write and rehearse a runbook for this failure mode.
- Load test the service at twice the expected peak before the next campaign.
